PROFESSIONAL SUMMARY

Platform Engineering Manager with 9+ years of experience building Internal Developer Portals (IDPs), self-service developer platforms, and cloud-native infrastructure tooling across insurance, healthcare, and e-commerce. Proven Product Owner of developer experience platforms -- managing roadmaps, sprint backlogs, and engaging engineering teams as internal customers. Hands-on with Backstage IDP, GitOps workflows, ArgoCD, GitHub Actions, Kubernetes, Helm, and AWS infrastructure. Consistent track record cutting deployment lead times by 30-40%, reducing developer onboarding time, improving DORA metrics, and driving golden-path template adoption across engineering organizations.

TECHNICAL SKILLS

Developer Experience and IDP: Backstage (service catalog, Software Templates/Scaffolder, plugin development, TechDocs), Internal Developer Portal (IDP), golden-path templates, self-service developer workflows, service onboarding automation, developer advocacy, platform as a product

GitOps and CI/CD: GitHub Actions, Jenkins, ArgoCD, Flux, GitOps, Git-based infrastructure delivery, CI/CD pipeline design, trunk-based development, reusable workflow components, composite actions, OIDC-based authentication

Containers and Orchestration: Kubernetes (K8s), Helm, Docker, Amazon EKS, RBAC, Pod Security, container security, microservice orchestration, Horizontal Pod Autoscaler, Kubernetes Operators

Cloud and Infrastructure: AWS (EC2, VPC, Security Groups, IAM, KMS, S3, Lambda, Kinesis, Glue, Redshift, EMR), Microsoft Azure (Synapse, Data Factory, Fabric), AWS CLI, Infrastructure as Code

Observability and Monitoring: Prometheus, Grafana, Datadog, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), PagerDuty, SLA/SLO monitoring, DORA metrics, alerting pipelines

Languages: Python, TypeScript, Node.js, SQL (PostgreSQL, T-SQL), Java, Scala

Leadership and Product Ownership: Agile, Scrum, Product Owner, Technical Roadmapping, Backlog Management, Sprint Planning, Developer Advocacy, Stakeholder Engagement, Hiring, Performance Management, OKRs, Team Topologies

Data and Integration: Snowflake, Databricks, Apache Kafka, Apache Spark, Power BI, Tableau, Azure Data Factory, AWS Glue

PROFESSIONAL EXPERIENCE

Platform Engineering Lead

PEMCO Insurance / Bourntec Solutions -- Chicago, IL | July 2025 - Present

- Owned 1-to-3-year platform engineering roadmap as Product Owner; managed backlog prioritization, led sprint planning and reviews, and aligned tooling investments by treating engineering teams as internal customers to drive developer experience improvements.
- Configured and extended Backstage IDP service catalog to centralize ownership metadata for 50+ microservices and data services; reduced developer onboarding time by 30% through standardized catalog-info YAML and component tagging.
- Built self-service Software Templates in Backstage Scaffolder to standardize project scaffolding, CI/CD pipeline wiring, and cloud resource provisioning -- codifying organizational best practices as golden-path templates used across all engineering teams.
- Engineered automated GitHub Actions CI/CD workflows cutting deployment latency by 30% via parallelized build, test, and release automation aligned with GitOps delivery practices.
- Designed API-first microservices enabling self-service access patterns for internal engineering teams; improved data accuracy by 25% through standardized interfaces and automated schema validation.
- Orchestrated end-to-end platform infrastructure across Microsoft Fabric and Databricks, ensuring 99.9% availability and SLA compliance for critical engineering workloads.

Platform Engineering Manager

Kemper Insurance / Bourntec Solutions -- Chicago, IL | August 2023 - July 2025

- Managed 8 direct reports (Platform and Data Engineers) in an Agile environment; owned hiring, quarterly performance reviews, OKRs, and technical mentorship as engineering manager for the Developer Experience pod.
- Acted as Product Owner for the internal developer platform -- ran sprint backlog grooming, led planning and retrospectives, and gathered requirements from 8 engineering teams as internal customers to prioritize tooling adoption and improve developer experience.
- Implemented GitHub Actions CI/CD pipelines and GitOps-based delivery workflows; reduced deployment lead time by 40% and established trunk-based delivery across engineering teams.
- Built reusable self-service platform libraries and golden-path pipeline components in Python, reducing development effort by 25% across 6 teams -- tracked via internal NPS and ticket-volume metrics.
- Integrated Prometheus and Grafana monitoring dashboards providing real-time visibility into pipeline health, DORA metrics, and SLA compliance across the developer platform.
- Enforced Kubernetes RBAC policies and least-privilege IAM roles to align platform security posture with enterprise compliance requirements (HIPAA, GDPR).
- Led enterprise-wide modernization of 70+ legacy reporting tools to self-service Power BI pipelines, cutting licensing costs by 40% and improving stakeholder adoption.

Platform / Infrastructure Engineer

Select Rehabilitation -- Chicago, IL | May 2022 - August 2023

- Deployed and managed containerized microservice infrastructure using Docker and Kubernetes on AWS EKS; improved deployment automation, scalability, and operational reliability for healthcare data workloads.
- Built GitHub Actions pipelines for automated testing, container image builds, and environment deployments; established CI/CD best practices and GitOps delivery patterns across the engineering organization.
- Provisioned and secured cloud environments using AWS EC2, VPC, Security Groups, and IAM; enforced network isolation and least-privilege access for HIPAA-regulated workloads.
- Designed scalable ETL/ELT pipelines using Azure Data Factory, Databricks, and AWS Glue; migrated 100+ IBM Cognos BI reports to an in-house Python-based platform, cutting reporting costs by 20%.

Senior Data Analyst

Amazon (Pricing Analytics, Amazon Fresh, Amazon Pay) -- Bangalore, India | May 2016 - December 2020

- Partnered with Product Managers, Software Engineers, and Data Scientists to design platform data architectures supporting global expansion of Amazon Fresh (US, UK, Japan, Germany).
- Developed automated Python-based backend services and analytics pipelines for internal engineering teams, improving data refresh efficiency by 30% and enabling near-real-time business insights.
- Led large-scale refund-tracking initiative during COVID-19, consolidating fragmented data via APIs to reduce customer service contacts by 90%+ (3,000 to 200 per week).
- Delivered executive-facing Tableau dashboards for Weekly Business Reporting (WBR) consumed by leadership across 22+ business categories.

CERTIFICATIONS

- AWS Certified Data Engineer -- Associate
- Tableau Desktop Specialist
- (Pursuing) AWS Certified DevOps Engineer -- Professional

EDUCATION

MS in Business Analytics | GPA: 3.9

University of Illinois Chicago, Chicago, IL | January 2021 - May 2022
